

Ingegneria dei dati 2024/2025

Homework 1

(da svolgere in gruppo)

Paolo Merialdo

Homework 1

1. Choose a computer science research topic (e.g., query optimization) and download HTML scientific papers on the chosen topic from ar5iv

at least 300 papers

3. From the HTML source files, extract:
 - tables
 - tables' captions
 - footnotes in the tables or in the captions
 - paragraphs containing references to the extracted tables

1. Download papers

- arxiv.org is a free distribution service and an open-access archive for nearly 2.4 million scholarly articles in the many scientific fields. Materials on this site are not peer-reviewed by arXiv
- ar5iv.org provides articles from arXiv.org as responsive HTML5 web pages
- Download the HTML version of ~300 articles on a given computer science topic from ar5iv
- Create a text file **read.me** containing the research topic and the list of urls of the processed HTML files
- Store the HTML files downloaded from ar5iv in a directory with name **sources**

2. Data extraction

- For each paper:
 - Using XPATH, extract all the tables;
 - for each table extract its caption, footnotes (if present), paragraphs with references to the table
 - Store the extracted data in a .json file, named exactly as the identifier used on ar5iv
E.g., for the paper <https://ar5iv.labs.arxiv.org/html/2409.17044>, create the file 2409.17044.json
- Structure of the json file

```
{ "id_table_1":  
  {  
    "caption": "text",  
    "table": "html_table",  
    "footnotes": ["footnote1", "footnote2", ..],  
    "references": ["paragraph", "paragraph", ..]  
  },  
  "id_table_2": {..}, ..}
```
- Store the json files in a directory with name "**extraction**"

2. Data Extraction

- To assess the quality of the extraction, check:
 - If all tables are extracted
 - If all footnotes and captions and paragraphs with references were extracted. If something is missing, refine the XPATH expression
 - Note that every table should have at least one referencing paragraph

3. Presentation

- Prepare a 10' presentation of you work (.pdf or .pptx)
- Your presentation must include:
 - Your names
 - The computer science topic that you have chosen
 - Number of papers downloaded
 - Some stats on the extracted data (e.g., distribution of the number of tables)
 - How you have assessed the quality of the extraction
 - Challenges, difficulties and learnt lessons

Homework 1: deadline

- Create a file homework1.zip containing:
 - the read.me file
 - the sources directory
 - the extraction directory
- Change the file name adding the .pdf extension:
homework1.zip.pdf (MS Forms does not accept .zip files)
- By Oct 19 2024, 12.00am, upload the homework1.zip.pdf and the presentation files through this form:
<https://forms.office.com/e/5nmvtKgY11>
